

— PROPOSAL · PREPARED FOR DICK'S PAWN SUPERSTORE

Where AI actually **pays for itself** in a pawn superstore.

A practical plan to cut the hours between “we took it in” and “it’s selling everywhere” — and to stop losing the customers who never reach a person.

🏆 The Grand Strand's #1 Pawn Superstore

Why pay retail? Shop thousands of deals — or turn your stuff into **same-day cash.**

Family-owned since 1987 with five locations across the Myrtle Beach area. Jewelry, electronics, instruments, tools, sneakers & more — new items hit the floor every single day.

What your catalogue actually says about your floor

Pulled directly from your live product feed on 26 July 2026 — 1,565 items, 1,527 of them in stock.

You are a jewelry business with a superstore attached

65% of everything listed online is jewelry and gold. That is a strength — it's high-margin and it's what your jewelers are for — but online it means most visitors are handed 991 rings and asked to browse.

Two things I noticed in the data

Stock arrives in batches. The newest 8 items were all listed the same day. Between batches, other departments go quiet online even when product is on the floor.

Your tagging is good but private. Codes like *GR*, *AP*, *HW* are consistent enough to automate against — that's a real asset most shops don't have.

In a pawn business, AI is not a cleverness upgrade. It's a speed upgrade.

Your team already knows what things are worth. That judgement is the business, and it isn't for sale.
What AI removes is the dead time around it.

1

Every day an item sits in the back un-listed is capital parked on a shelf. Shortening that is the single biggest lever in the whole operation.

2

Calls that ring out, DMs after closing, “do you have...” questions nobody answers. Those aren't just sales — in a pawn shop they're loans you never wrote.

3

The same ring can be on your site, eBay, and in local search results — or on one of them. The difference is listing labour, not inventory.

AI will not appraise better than your staff. It will make sure that by the time they've finished appraising, the listing is already written.

Six places AI takes hours out of the week

Ordered by how quickly they pay back. Each one is a workflow, not a product you have to buy.

1

Listing production

Photo in, listing out: title, description, category, specs, tags. Your descriptions already read like they're AI-assisted — the win is turning that into a pipeline instead of a person's afternoon.

PAYBACK: **FASTEST**

2

Photo cleanup

Batch background removal, consistent crops and lighting. 1,435 of your items already carry 3+ photos, so the volume is real and so is the time spent on it.

PAYBACK: **FAST**

3

Comp research

Pull recent sold comps and hand them to whoever is at the counter. The appraiser still decides — they just stop typing searches while a customer waits.

ASSISTS ONLY · **NEVER DECIDES**

4

Front-desk deflection

"Do you have...", hours, directions, what you buy, is it still available. Answered on the site and by text so the phone rings for the calls that actually need a person.

PAYBACK: **FAST**

5

Review responses

2,000+ reviews across five locations. Drafted in your voice, queued for a manager to approve or edit. Nothing posts unread.

PAYBACK: **STEADY**

6

Cross-store stock lookup

A customer in Conway asks for something sitting in North Myrtle Beach. Staff should find it in seconds, from their phone, without calling four stores.

PAYBACK: **STEADY**

Six places the same work brings money in

These lean on inventory you already own and customers who already know you.

1

Local search, per city

“Pawn shop Conway SC” has no page on your site today — that URL returns a 404. Five city pages now exist in the rebuild, each marked up as a real business location.

BUILT & READY

2

Store data in search

Your product pages already carry proper markup. Your *homepage carries none* — no hours, no addresses, no ratings for five locations. That’s a free fix.

BUILT & READY

3

More shelves per item

eBay is one channel. Once listing is a pipeline rather than manual work, adding channels costs almost nothing per item.

PHASE 3

4

Tell people what came in

“You asked about a Rolex — one just landed in Surfside.” Wants get logged at the counter; matching arrivals trigger a text. This is the highest-intent list you own.

PHASE 2

5

Sell-side lead capture

The people who want to *pawn* are the margin engine. An online quote form that reaches a real inbox turns “I wonder what it’s worth” into a visit.

PHASE 1

6

Daily content without a person

New-arrival posts for five stores, drafted from the same listing pipeline, scheduled and approved in one sitting a week.

PHASE 3

— MEASURED, NOT GUESSED

What’s costing you today

I measured your live site against the rebuild on 26 July 2026. You can re-run every one of these.

	DICKSPAWN.COM TODAY	THE REBUILD	WHY IT MATTERS
Homepage weight	94.7 KB transferred 863 KB of HTML, 77 scripts	7.7 KB	Most of your traffic is on a phone, often on beach-town cell service.
Time to first byte	0.42 s	0.15 s	Speed is a ranking factor and a bounce factor.
Business markup on homepage	None	All 5 stores	Hours, addresses, phone and rating handed to Google directly.
Per-city landing pages	None (404)	5 pages	You compete in five separate local markets with one page.
Link previews when shared	Square logo	Designed card	Every text, post and email that shares your link.
Product page markup	Already correct ✓	Matched	Credit where it’s due — Shopify does this part well.

Transfer sizes measured compressed, cache-busted, from the same connection. “Business markup” = LocalBusiness/PawnShop structured data; your homepage returned zero structured-data blocks.

First 90 days

Each phase ends with something you can measure. If a phase doesn't earn the next one, we stop.

WEEKS 1–3

Launch

- New site live on your domain
- All 5 locations marked up for search
- City landing pages published
- Quote form wired to a real inbox
- Analytics + call tracking in place

You'll see: **baseline traffic, calls and form fills** — the number everything else is judged against.

WEEKS 4–8

Throughput

- Photo → listing pipeline for one department
- Comp-research tool at the counter
- Staff training, written runbook
- Customer “wants” list started
- Review response queue

You'll see: **minutes per listing, before vs after**, timed on real items.

WEEKS 9–12

Reach

- Pipeline extended to all departments
- Additional sales channels
- New-arrival alerts to the wants list
- Weekly social from the same pipeline
- Quarterly review + what's next

You'll see: **items listed per week and online revenue** against your week-3 baseline.

Your inputs, not my estimates

Read this honestly: the top three are hard — they're just hours x wage. The bottom two are capacity: not profit; freed hours only turn into listings if you use them that way, and listed value is not margin. This is

What I won't let AI near

You run a licensed, regulated business with a 4.9-star reputation built over 39 years. Both of those are easier to damage than to build.

✗ **Appraisals and loan amounts**
The judgement your business is built on stays with your people. AI hands them research, never a decision.

✗ **Anything regulated**
Identification, holds, reporting obligations. These follow your existing process and your counsel, untouched.

✗ **Customer information in public tools**
No customer or transaction data pasted into consumer chatbots. Ever.

✗ **Publishing without a human**
Listings, replies and posts get drafted automatically and approved manually. Nothing reaches a customer unread.

✗ **Fake anything**
No invented reviews, no manufactured urgency, no stock photos pretending to be your inventory. Your 2,000 real reviews are worth more.

The rebuild already follows this rule. Every product photo on it is your actual merchandise, pulled from your feed — nothing generated, nothing borrowed.

One thing I'll always do

Tell you when something isn't worth doing. There are AI tools I could sell you for this business that wouldn't earn their keep, and I'd rather keep the account than win the invoice.

START HERE

STEP 1 • PILOT

\$1,500

Two weeks, one workflow, one department.

- ✓ Pick your slowest listing category
- ✓ Build the photo → listing pipeline
- ✓ Time real items, before and after
- ✓ Written findings either way
- ✓ Credited in full toward launch

If the hours don't show up, you get the written findings and we shake hands. No pressure to continue.

STEP 2 • LAUNCH

\$7,500 one-time

Everything in the 90-day plan, phases 1 and 2.

- ✓ Site live on your domain
- ✓ All 5 locations in local search
- ✓ Listing pipeline across departments
- ✓ Lead capture, analytics, call tracking
- ✓ Staff training + written runbook
- ✓ 90 days of support included

The site is largely built — you're paying to finish, migrate and operationalise it.

STEP 3 • ONGOING

\$2,400 /month

Optional. Month to month after the first quarter.

- ✓ Pipeline kept running and improved
- ✓ New channels as they're worth adding
- ✓ Review + social queues managed
- ✓ Monthly numbers against baseline
- ✓ You keep everything if you stop

Cancel with 30 days' notice. No lock-in, no licence you can't leave.

Ad-hoc work outside a retainer: \$125/hour. Prices hold for 60 days from the date on the cover.

For comparison: a part-time e-commerce coordinator runs roughly **\$56,000–\$75,000/year** once payroll burden is counted. The ongoing retainer is **\$28,800/year** — and the pipeline keeps working when someone's on holiday.

You've already seen the work

I did the homework before the meeting

I pulled your full catalogue and worked out your internal tagging scheme. **HW** means handbags & wallets, not hardware — which is why a naive import would file Louis Vuitton under Tools. I found that because I read your data, not a summary of it.

Local, and staying that way

Myrtle Beach. I can stand at the counter in Surfside and watch how listings actually get made, which is the only way to automate it without breaking it.

The deliverable came first

Most proposals ask you to imagine the result. There's a working 1,576-page site on your real inventory that you can open on your phone right now, before you've paid anything.

Small enough that you get me

No account manager, no offshore hand-off, no ticket queue. You get the person who built it, and you can text him.

— NEXT STEP

Pick one department. Give me two weeks.

We'll time how long it takes to list items today, build the pipeline, then time it again. You'll have a real number — from your floor, your staff, your stock — before you decide anything bigger.

\$1,500
